

*Don't Be a Prisoner of Pain!*

## **Declare Your Independence from Pain and Restricted Mobility**

You probably already know that pain and limited mobility are major problems that affect up to 100 Million American adults. In addition, you may know that pain and lack of mobility can also have negative, even deadly, health consequences. If you are the 1 of the 100 Million adults suffering from constant pain and restricted mobility, you just want to know the solution.

*The Rapid Release Home Unit is Your Go-To Tool to Relieve Your Pain and Get You Moving!*

Whether you're a serious athlete, a weekend warrior or just want to pick up your grandchildren without pain, the cutting-edge Rapid Release Technology is the solution you've been waiting for.

**Physicians, chiropractors, pro sports trainers acupuncturists, massage and physical therapists use Rapid Release Technology every day to treat pain associated with:**

- Rotator Cuff Syndrome
- Neck and Back Pain
- Carpal Tunnel Syndrome
- Shoulder and Elbow Pain
- Undiagnosed Pain
- Knee and hand pain
- Spasms, Tight muscles, stiff joints

and un-diagnosed pain, and much more!

Rapid Release Technology uses vibration frequencies that resonate with scar tissue adhesions, removing restrictions that typically result in immediate reduction in pain and increase in ease of movement. Two treatment heads provide unique effects tailored to treat specific body parts and conditions.

Whether you're a serious athlete, a weekend warrior or just want to pick up your grandchildren without pain, the cutting-edge Rapid Release Technology is the solution you've been waiting for.

## ***Take Charge of Your Health and Get Moving with Rapid Release!***

Scar tissue and adhesions "spot weld" tissues together as a part of the body's natural healing process. This causes tightness, tension and pain.

Rapid Release is Targeted, High-Speed Vibration Therapy that breaks up scar tissue and adhesions caused by:

- Injury
- Surgery
- Repetitive stress
- Sedentary lifestyle
- Overuse
- Stiff muscles and joints ... and more.

Rapid Release Technology uses targeted vibration frequencies that resonate with scar tissue adhesions, removing restrictions that typically result in immediate reduction in pain. It releases tight muscles and stiff joints to quickly restore ease of movement. Two treatment heads provide unique effects tailored to treat specific body parts and conditions, including back pain.

These simple sessions only minutes and can fit into any busy schedule. Rapid Release is comfortable and easy to use, and offers cutting-edge pain relief technology that actually works!

Rapid Release is a FDA registered Class I Medical Grade device.

## **Disruptive Pain Therapy**

Rapid Release is a breakthrough in pain relief therapy. Rapid Release is unique in utilizing high frequency vibration known to resonate with scar tissue releasing painful adhesions and increasing your range of motion. Rapid Release is also unique in triggering highly beneficial neurological effects to quickly relieve spasms and eliminating pain neurotags. High frequency vibration is also extremely effective at increasing blood flow and easing up tight muscles and connective tissue promoting ease of movement in your everyday tasks or bettering your time on race day. Rapid Release is comfortable for both patients and the practitioner and the results that you will achieve with Rapid Release put it in a class all by itself. We guarantee it.

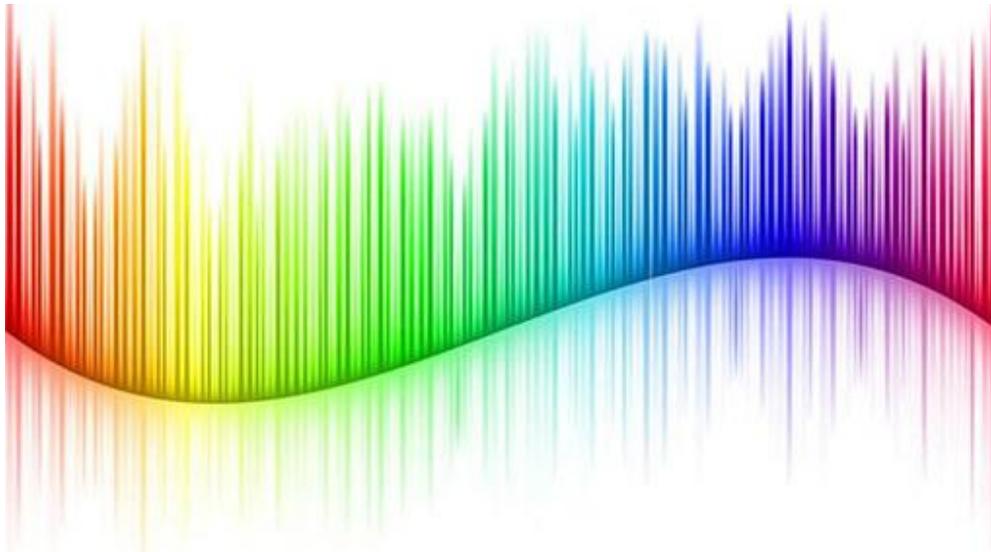

## **Scar Tissue Adhesions**

Scar Tissue forms in the body as a temporary patching mechanism for wounds caused by surgery, trauma or repetitive stress. This scar tissue is made from collagen just like our skin but without blood supply it dies, dries out, constricts and becomes brittle. Scar tissue fastened to tissues not normally connected, is called an adhesion. Adhesions can spread, entrapping nerves, causing pain and numbness or limiting range of motion. Un-diagnosed pain and restricted mobility are likely to be caused by these adhesions.

## The Science of Resonance

RRT relies upon the science of resonance. Like the piano note vibrating the corresponding guitar string across the room, the target absorbs vibrational energy and oscillates. Same principle as the opera singer who can vibrate a crystal glass across the room until it breaks. RRT operates at a frequency much faster than the fastest competition. Notice the symmetry of high speed compression waves through healthy tissue. Now notice the lack of waves when RRT is put over chronic fibrous tissue. The energy is absorbed by the denser tissue and it begins to vibrate.

## Tonic Vibration Reflex

Rapid Release elicits the Tonic Vibration Reflex (TVR), quickly relaxing muscles. Vibrating muscles between 100 and 200Hz triggers the Tonic Vibration Reflex. This neurological effect quickly relaxes muscle cramps, spasms and muscle guarding, all the pain that comes with it. By operating in the middle of that band, Rapid Release is unique and efficient in creating this effect.

**Use Rapid Release Technology's patented vibration technique to elicit the TVR and increase mobility!**

## Float Your Fascia

Vibration has been shown to increase the hyaluronic acid pressure where the fascia resides and heated tip lowers the viscosity of this fluid allowing the fibers to separate and easily glide. Fascia may be the missing piece for your lingering injury.

**Rapid Release Technology frees your patients AND yourself of pain and feel the joy of movement!**

*Mathematical Analysis of the Flow of Hyaluronic Acid Around Fascia During Manual Therapy Motions* Max Roman, PhD; Hans Chaudhry, 2013

## Reduce Your Hypoxia

Muscle fibers require ATP to contract and oxygen to release. Without ample oxygen, a certain percentage of your muscle cells never fully unlock after you use them. Tight muscles restrict blood flow making them ever more hypoxic. H1F-A is the master transcriptional regulator of cellular and developmental response to hypoxia. The over-expression of *HIF1A* by either hypoxia has been heavily implicated in cancer biology, as well as a number of other pathophysiologyes.

**Use Rapid Release Technology to loosen muscles and increase blood flow.**

Please see this recent study that shows Rapid Release to be the most effective modality to increase circulation in tendons [here](#).
